Unlocking Innovation Through Advanced Mathematical Thinking.

M2PI connects organizations with mathematicians to tackle real-world challenges through focused, short-term projects.

Three weeks of advanced mathematical expertise—focused on a partner challenge, with clear deliverables on a fixed timeline.

M2PI has delivered more than 40 partner projects across sectors including:

- Finance
- Manufacturing
- Energy & Utilities
- Election Analytics
- Urban Planning
- Engineering
- Healthcare

How It Works

- **Partner organizations submit a real-world challenge** suitable for mathematical analysis.
- **Selected graduates & postdocs receive targeted preparation** in partner-facing communication, coding & project delivery.
- **Teams collaborate with partners & faculty mentors** during an intense two-week "sprint" to deliver actionable results.

What Partners Receive

- **Mathematical analysis & methodology** tailored to the partner's specific challenge
- **A concise summary document** outlining a proposed model, prototype, or workflow to support a solution
- **Access to a talent pipeline** of highly trained mathematicians & emerging professionals

There is no cost to participate—partners simply provide a real-world challenge and designate a mentor to engage with the project team during the two-week rapid engagement.

M2PI is supported through grants and sponsors.

Sponsorship opportunities are available for organizations that want to engage with our talent pipeline—with or without submitting a challenge. Sponsorships help further support:
